# 1. Introduction

---

## 1.1 Overview

Baltimore City Public School Systems requires spending transactions to be approved by their respective owners. The owners are responsible for managing their budgeted funds. Operating & Capital Grant Funds are budgeted at various levels but can be broadly classified at an Organization (Dept), Function (Program), Location, Category and Project levels. For every combination, there is an MCPS staff assigned to track the usage. These MCPS staffs are the owners of these funds and when spending transactions are created anywhere in the application, the respective owners must approve the transaction prior to the end of the life cycle of the transaction.

Oracle Cloud applications provide the ability to route spending transactions types (e.g. journal entries, requisitions, expense reports) through a pre-defined approval process referred to as workflow. A separate and unique workflow can be established for each transaction type.

The Systems Integrator has proposed the following:

| S.No | Transaction Type             | Organization Owner                          | Function + Location + Operating Project Owner | Other Approvals                                 |
|------|------------------------------|---------------------------------------------|-----------------------------------------------|-------------------------------------------------|
| 1    | Purchase Requisitions        | HCM Department Cost Center Manager Approval | Static Approval group Based Approval          | Based on Purchasing Policies                    |
| 2    | Purchase Orders & Agreements |                                             |                                               | Buyer Approvals as per Purchasing Policies      |
| 3    | Expense Reports              | HCM Department Cost Center Manager Approval | Function & Project Owner Approvals            | Capital Projects are routed to Project Mangers. |
| 4    | AP Invoices                  | Resource Based Approvals                    | Resource Based Approvals                      | Based on Payables Policies                      |
| 5    | GL Journals                  | Static Approval group Based                 | Static Approval group Based                   | Based on Accounting Policies                    |

|   |                |                             |          |                                         |
|---|----------------|-----------------------------|----------|-----------------------------------------|
|   |                | Approval                    | Approval |                                         |
| 6 | Capital Grants | Project Role Based Approval |          | Based on Grants Administration Policies |

The purpose of this document is to provide a functional overview of the workflow that will be established to support the Phase1 MCPS Financials Cloud implementation. Defining the logic for the routing of the various transaction types is a key component for the implementation.

The design contained herein is the result of the Workshop, Sprint1, and Sprint2 design sessions held between MCPS and AST module team members. Changing the design of these workflows could impact the project timeline. Role based Approvals have been replaced with Static Approval based Approvals.

## 1.2 Key Concepts

To understand the logic utilized for approval workflow, it is important to understand four key concepts:

- 1) **Cost Centers** – a cost center is a number that represents the smallest segment of an organization for which costs are collected and reported. It can be a division, location and/or project of an organization to which costs can be specifically allocated. Oracle requires at least one segment on the Chart of Accounts to be identified as “Cost Center”. MCPS Chart of Accounts has “Organization” Segment as the identified “Cost Center”.
- 2) **HCM Department** – a HR function that allows organizations to define a group of workers working towards common objectives. These departments can be assigned Managers who may control and maintain the department’s activities. Oracle allows association of one or more Cost Centers to these Departments and also allows each Cost Center to have its respective Manager. With MCPS HCM not currently being implemented in Oracle, the current implementation team will not create these HCM Departments. The implementation team will bring in the Capital Grants related Departments and assign their respective Cost Center Segment Value and associate their respective managers as well. The rest of the Departments would be grouped under a single “Central Office” related department where the rest of the Cost Center Segment Values along with
- 3) **HCM Cost Center Manager Approval** – based on the Cost Center Value charged in the spending transaction, the cost center manager is derived, and the transaction is routed

---

for the Manager's Approval

- 4) **Roles** – roles are job roles that represent system permissions that an employee has. The implementation team is using this concept to route the “Non-Cost Center” manager approvers.

---

## 2. MCPS Funds Owners Approvals

---

### 2.1 Background

The workflow changes from EBS to Cloud inevitably creates implementation design challenges. For example, in FMS, the department segment became a floater segment which stored non-department values for non-standard approval routing. In Cloud ERP, the ability to add department or other values that were not predefined was eliminated. The requirements across various transaction entities is much more rigid.

In FMS, a combination of Approval Management and Workflow Builder tools were deployed. In Cloud ERP, Business Process Management (BPM) is the only dedicated tool for Workflow Approvals. This tool expects Organizations to implement a hierarchical approval for their transactions. The hierarchies are natively designed to build approvals based on “Who’s the transaction creator?”. MCPS requires that transactions to be routed based on “What’s the account on the transaction?”.

---

### 2.2 EBS Legacy Account Owner Workflow Logic

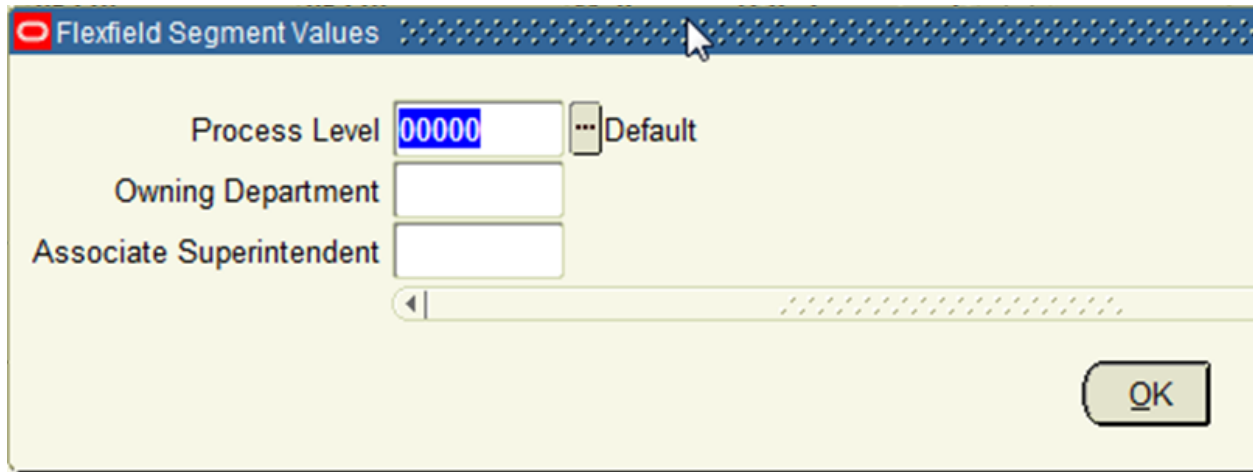

MCPS utilized descriptive flex fields (DFF) to assign approvers for a department. When a request for approval permissions was submitted, the Accounting Department would create new department permutations using the DFF and assign approval permissions to individuals. The creation of new department permutations, instead of selecting predefined departments from a list, resulted in an overabundance of department permutations and an unmanageable approval structure. This also diluted the purpose of the key segment value “Department” in the Chart of Accounts design.

MCPS has the following DFFs for reporting on Chart of Account (COA) accounts, which are utilized to facilitate reporting requirements and approval workflows.

- Process level – User defined level with a company, such as office, dept, or division. For most process levels within MCPS, the budgeting of positions is to the process level. Every process level has a number and a name associated with it.
- Owning Dept – Affects the following workflows for requisitions, expense reports, and journal entries (non-budget)
- Associate Superintendent – Impacts workflow for expense reports. Top level routing for

executives.

### Department Segment

## 2.3 MCPS Requirements & Functionality Gap

MCPS approvals requires most of their approvals to be routed based on where the money is spent from. It is also determined that more than 90% of the transaction would require either a Department (Organization) approval or a Program (Function) Owner Approval or a Project Approval. However, the solution should be elastic enough to be expanded for other levels of approvals as well.

Oracle Cloud ERP approval configuration engine is predominantly based on “Who spends the money” rather than “Where the money was spent from?”. The native behavior of the workflow engine is to build routing paths based on the person trying to spend and their HR Supervisory paths. With MCPS not maintaining the HR Supervisory information in Cloud, this option would not be applicable for MCPS.

The gap in the functionality is to have transactions routed for the owner of the fund as opposed to the native functionality of routing transactions based on Spender’s HR supervisory hierarchy.

To avoid some of the pitfalls identified above with the EBS account owner logic, MCPS has developed a workflow based on the following logic:

| Seq. No | Chart of Accounts Segment | Rule | Action if True | Action if False |
|---------|---------------------------|------|----------------|-----------------|
|---------|---------------------------|------|----------------|-----------------|

|   |              |                |           |                           |
|---|--------------|----------------|-----------|---------------------------|
| 1 | PROJECT      | Approver Found | Stop Here | If not go to Function     |
| 3 | FUNCTION     | Approver Found | Stop Here | If not go to organization |
| 4 | ORGANIZATION | Approver Found | Stop Here |                           |

As per MCPS Requirements, we have setup workflow timeouts as below.

Frequency = 21 days and repeat 2 times.

Below screenshot depicts the same.

Frequency Day  Hour  Minutes

---

## 2.4 Cloud Based Account Owner Workflow Design

The combination of “Account Charged” + “Where the money is coming from?” requires a unique solution for MCPS transaction approvals. AST proposes the following solution:

1. Upon reviewing the workflow rules the following can be deduced:
  - a. 95% of the approvals are Organization Segment based
  - b. The remaining 5% requires either multi-segment or a different segment (function/project) approval
2. Create all Projects related Departments in HCM. Assign their respective Cost Center Values and Managers.
3. Create a Static Approval Group for every department in the following format:

ORG\_<Department Value>\_APPROVER

4. Assign the respective approvers with the Organization Approval groups
5. For Functions requiring approvals, create Static Approval Group in the following format:

FUNC\_<Function Value>\_APPROVER

6. Assign the respective approvers with the Function Approval groups
7. For Operating Projects requiring approvals, create Static Approval Group in the following format:

PROJ\_<Project Value>\_APPROVER

8. Assign the respective approvers with the Project Approval groups
9. Since Project/Function and Org segments require specific conditions to be met and based on the segment values provided by MCPS, Workflows will have hardcoding as below
  - a) Super Group Approval (GL) : Super Group Approval logic with specific user group would be hardcoded.
  - b) Project Workflow: Project Workflow is derived based on Fund/Function and Project Values provided by MCPS, these segments will be hardcoded in BPM.
  - c) Function Workflow: Function Workflow is derived on condition that the Transaction must bypass Project Workflow and active only for specific function segments. These function segments provided by MCPS would be hardcoded in BPM.

- 
- d) Inventory Account: Req has requirements to exclude all category based approvals for Inventory account. This has to be hardcoded in BPM.
  - e) \*\* All other values hardcoded would be explained in Technical section for specific Approval Tasks.

10. In BPM for each transaction entity:

- a. Define multiple approval stages; one approval stage is created for each segment approver.
- b. For Requisitions & Expenses, native cost center manager approval path will be implemented.
- c. For AP Invoices & Journals, the cost center approval will also be a Static Approval Group. Transactions will be routed to “ORG\_<Department Value>\_Approver” Owners.
- d. For transactions that require additional approval, have the BPM parse each segment value from the concatenated code combination value.
- e. On each approval stage, route the transaction to the respective segment approver Group.
- f. Application routes transactions to the person occupying the respective segment approver Group.

11. The reason for choosing this Approval Group-based approval design is predominantly because of the limitations and the inconsistent list of attributes across transactions available with the BPM tool.

12. The advantage of having a Static Approval Group based approval design is relatively simpler maintenance during a re-org. After a re-org, Change the Approver name in BPM Static Approval Groups region.

13. Another advantage of this design is that if there are **additional exceptions** to be added. For example, to set up a new location requiring an approval one would:

- a. Open the BPM workflow,
- b. Go to the location approval stage, and
- c. Add the new location value to the condition.

14. The biggest advantage of this design over role based is that upon inquiring the transaction for the approval tree, the results would display the names of Approver. In

earlier Role based approach, It would route to roles that the transactions being routed to and not the person occupying the role. AST also proposes a custom report/screen to supplement the approval design. The design of this report/screen would be to allow users to key-in their transaction number and obtain the current approver's name and their approval role.

15. An Approval Report is currently developed for the following Transaction Types:

- Requisition Approval
- GL Journals Approval
- AP Expense Report Approval
- AP Invoices Approval
- PO Approval

Alternatively, All Transactions can be selected to display Approvers for all transactions.

17. Report screenshot:

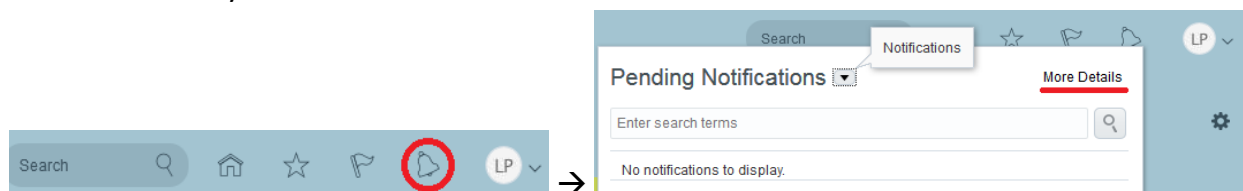

| TRANSACTION_TYPE  | Trx_Number    | Current_Approver                                                | CREATOR                       | Trx_Id          |

## 3. BPM Worklists

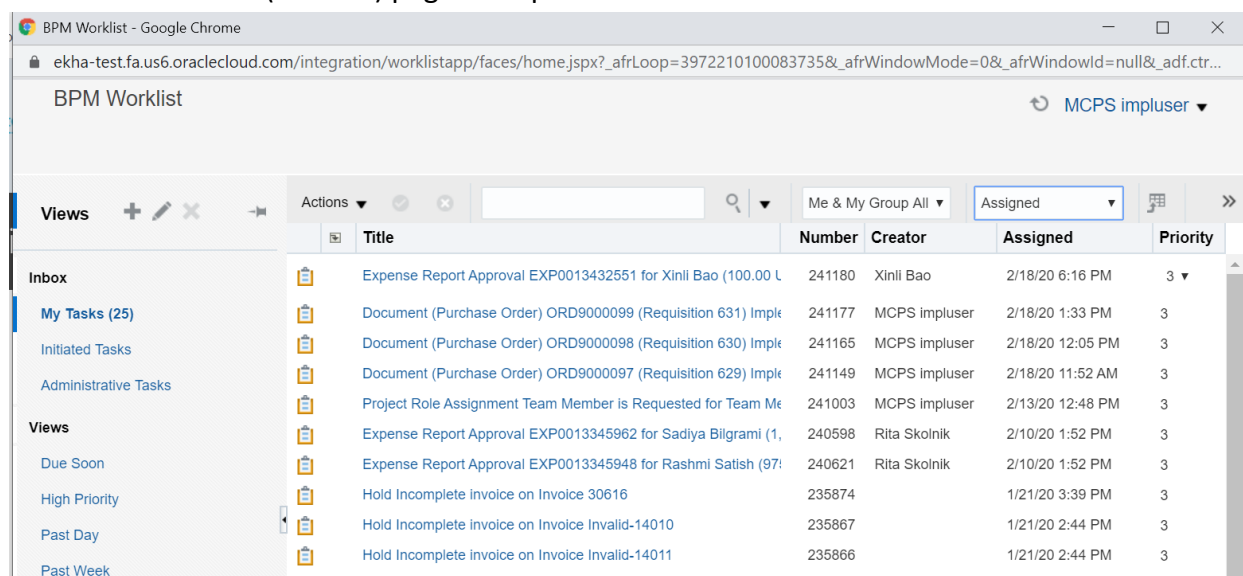

Oracle Business Process Management enables users to access and act on tasks assigned to them.

### 3.1 Accessing Worklists

Users can access their worklist using the bell icon. There may be times when the task notification does not show up or count of open notifications is not updated, this is synchronized by a job that is set to run every 5 minutes.

The Worklist Home (Task list) page will open in a new window.

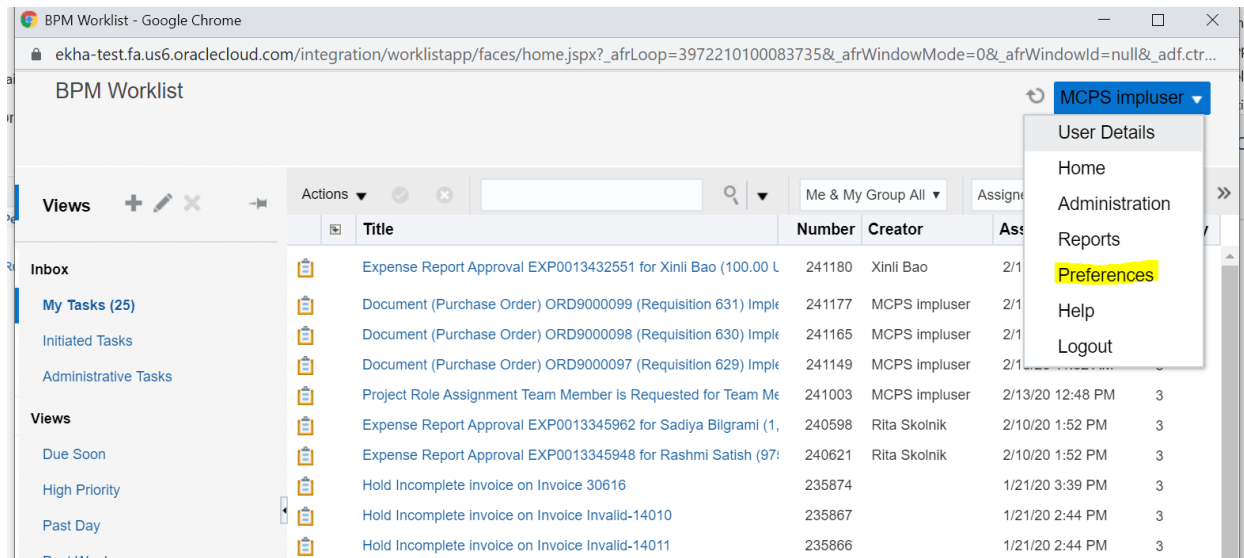

My Tasks → Lists all open, assigned tasks that require an action

Initiated Tasks → Are tasks that were responded to by the logged in user and is routed for further action

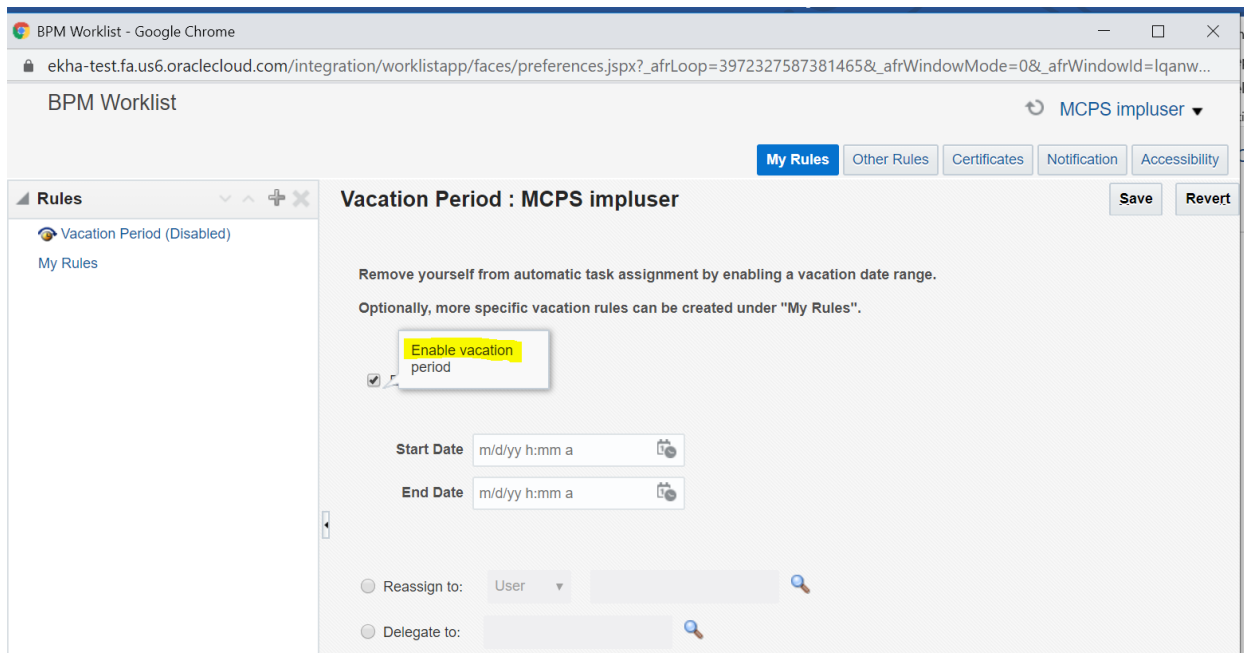

Administrative Tasks → Users with the administrative role will be able to view all worklist tasks

## 3.2 Setting a Vacation Period

BPM worklist → Click the ▾ and select Preferences

The following page is displayed, click Vacation Period, enable vacation Period and enter the dates of the planned outage, as shown below:

Users can delegate to users from the list of users using the magnifying glass.

### Reassign vs. Delegate

Reassign to → Reassign tasks to subordinates or groups you manage.

Delegate to → Delegate to any user or group. Any access rights or privileges for completing the task are determined according to the original user who delegated the task.

### 3.3 Setting a Rule

A rule can be used for setting up vacation (out of office) rule or to act on tasks, either a specific task type or all the tasks assigned to a user or group

#### Vacation Rule

Once a vacation period is set, users can create rules to reassign to other users.

The screenshot displays the 'My Rule' configuration interface in the BPM Worklist. The rule is named 'Out Sick' and is configured as a vacation rule. The 'Use as vacation rule' checkbox is checked. A message states 'Vacation period is currently disabled'. The 'TASKS' section is set to 'All Tasks'. The 'ACTION' section shows 'Reassign to' selected, with a dropdown menu set to 'User' and a search field containing 'bigrama'.

#### Other Rules

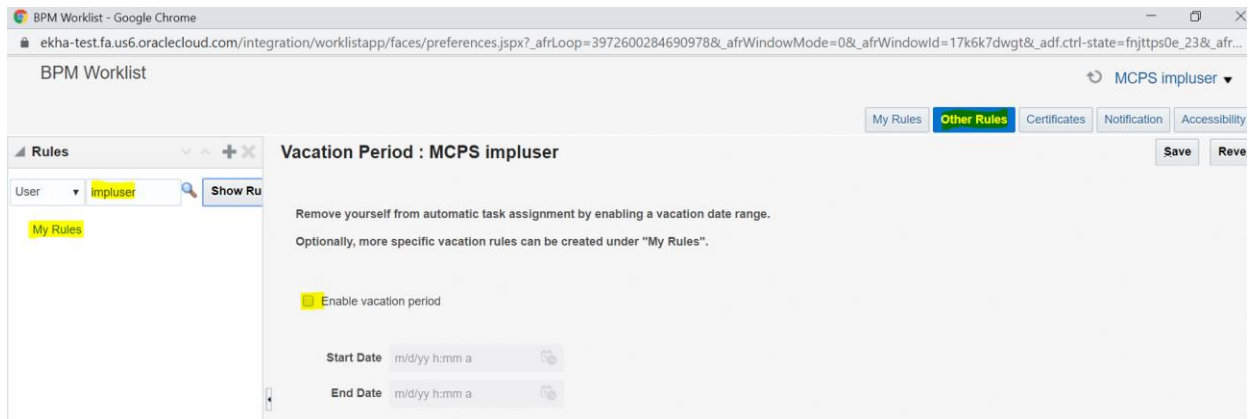

In addition to vacation rules, users can also set rule (uncheck “Use as vacation rule”) and set send task related notifications to users. For example, for expense requests, a Director can reassign to department manager.

---

### 3.4 Worklist Administrator

Only certain users within the organization will have this role. Tab *Other Rules* will not be available to other users.

Here the administrator can set up vacation or other rules on behalf of a user.

---

## 4. Cloud ERP Approvals Technical Design

### 4.1 BPM Overview

The BPM Worklist is a web-based application that enables users to view notifications and setup/manage approval rules.

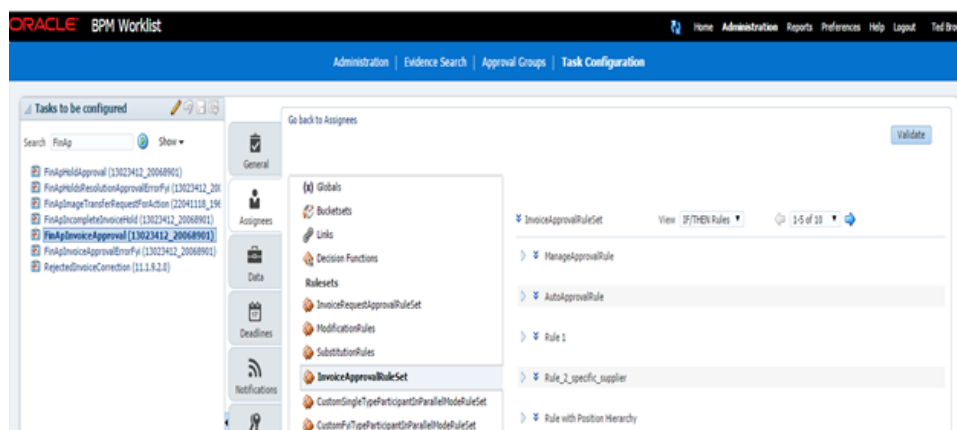

1. Users can view tasks assigned to them and perform various approval-related actions. For example, an approver can view the payables invoice approval notification, invoice details such as header amount, line details, amounts, and perform the necessary approval action.

The screenshot shows the Oracle BPM Worklist interface. The top navigation bar includes links for Home, Administration, Reports, Preferences, Help, Logout, and Ted Brown. The main content area displays a list of tasks with columns for Title, Number, Creator, Assigned, and Priority. The tasks are filtered by 'My Tasks (124)' and 'Assigned'.

| Title                                                                                 | Number | Creator      | Assigned         | Priority |
|---------------------------------------------------------------------------------------|--------|--------------|------------------|----------|
| Approval of Invoice APP_7837-01 from Advanced Network Devices (1,000.00 USD)          | 204172 | Mary Johnson | 2/24/15 6:42 AM  | 3        |
| Approval of Invoice GR Inv 1 17425 from Advanced Network Devices (2,500.00 USD)       | 204349 | Mary Johnson | 4/17/15 3:51 AM  | 3        |

2. For those with appropriate permissions, approval rules can be set up and managed.

The screenshot shows the Oracle BPM Worklist interface in the 'Task Configuration' section. The left sidebar lists tasks to be configured, including 'FaskyApproval (13023412\_20060901)'. The main content area displays the configuration for 'InvoiceApprovalRuleSet', showing a list of rules and a 'Validate' button.

---

## 4.2 Approval Key Concepts

### 4.2.1 List Builders

---

List builder is the way approvals management builds the list of approvals required for a transaction based on the rule condition. Each approval rule is associated with a list builder for generating the list of approvers. For Payables invoice approvals, the following list builders are supported:

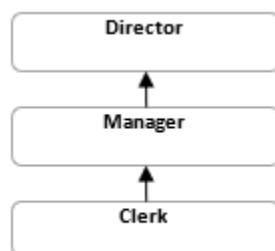

- Supervisory
- Job Level
- Position
- Approval Group –MCPS uses this
- Resource---MCPS in some cases

### 4.2.2 Supervisory

---

Approvals can be set up based on the employee supervisory hierarchy, which is defined in HCM. Employees must be set up in HCM with appropriate jobs and supervisors. For example, the clerk reports to the manager, who reports to the director.

The following figure is an example of an employee and supervisor approval structure.

---

For complete details on setting up the employee supervisory hierarchy, refer to the HCM application.

#### **4.2.3 Job Level**

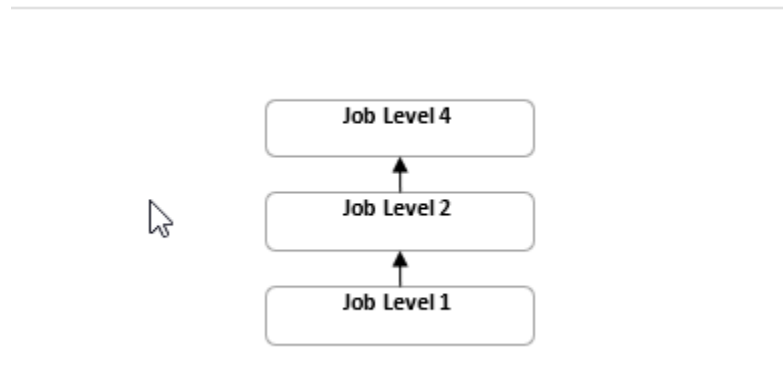

---

Job level routings are based on the supervisory hierarchy defined in HCM. Employees must be set up in HCM with the appropriate job levels and supervisors. For example, Job Level1 employee, a clerk, reports to Job Level2 employee, a manager, who reports to Job Level4 employee, a director.

The approval list is generated based on the starting position specified in the rule and continues until an approver with a sufficient job level is found. The supervisory hierarchy needs to be defined along with the corresponding job levels.

**NOTE: As part of the HCM implementation, MCPS must consider translating the current Approval Routing to a Job Codes & Job Levels and avoid the complexity that is currently implemented in this Phase.**

The following figure provides an example of a Job Level structure:

For complete details on setting up job levels and assigning job levels to employees, refer to the HCM application.

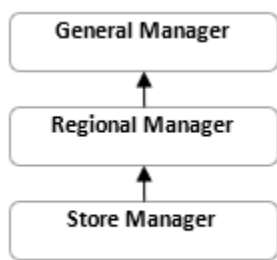

---

#### 4.2.4 Position

---

Organizations can also choose to route invoice approvals based on the position hierarchy defined in HCM. The position hierarchy needs to be defined and employees must be assigned the corresponding positions.

Here's an example of a position hierarchy approval structure for Beta Retail:

For complete details on setting up the position hierarchy, refer to the HCM application.

#### 4.2.5 Approval Groups

---

An approval group consists of a static predefined set of users configured to act on a task. Depending on the participant type defined, approval tasks are routed to an approval group in serial or parallel mode. For example, you can create an approval group called Finance Group comprised of users from the finance department who need to participate in the approving of a task.

New approval groups can be created, or existing approval groups can be edited from the Approvals Groups tab on the BPM Worklist application Administration page.

Steps to create an approval group:

Sign into the BPM Worklist application as an administrator

1. Click the Administration link.

2. Click the Approval Groups tab.
3. Click the  icon in the left side pane.
4. Enter the name of the approval group.
5. Click the  icon in the Details area to add users to the approval group.
6. Select users to add to the group.
7. Save the approval group.

#### 4.2.6 Resource

Using the Resource list builder, you can build the approvers list by using a specific user, group duty role, or application role. Resource list builder is one of the easiest ways to build the approvers list.

#### 4.2.7 Participant

A participant is a user or set of users who are participating in the approval process, including their routing policy in the process. Each participant is associated with a single rule set. Approval rules are defined in the context of a rule set and you can create many rules under one rule set. Based on your approval requirements, you need to configure the approval rules within the context of a participant.

---

#### 4.2.8 Types of participants

---

| Participant                                                  | Description                                                                                                                                                                                          |
|--------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Serial<br><br>Mostly                                         | Approvers work in sequence. This is a commonly used participant type for configuring rules using management hierarchies where approvals are performed in sequential fashion one after another.       |
| Parallel<br><br>Susan testing this also for Journal approval | A set of approvers work in parallel. For example, an invoice is assigned to all users simultaneously. Unanimous approval is required; if one user rejects the invoice, the invoice will be rejected. |
| Single                                                       | A task is assigned to more than one user; however, the outcome is solely decided by the first user to approve or reject.                                                                             |
| FYI                                                          | Users receive a notification for informational purposes only, no response is necessary. Users cannot perform any actions on FYI notifications.                                                       |

---

### 4.3 Static Approval Groups and Cost Center Manager.

MCPS Workflow requirements consists of using Charge Account segments to derive the specific approvers against set conditions. This required AST to build a complex custom workflow which utilize below Oracle Workflow configurations.

#### 4.3.1 Cost Center Manager (Org Segment)

---

Workflow Approval Processes like Expenses & Requisitions Utilize the Cost Center Manager to identify the Cost Center Manager during Approvals.

Cost Center Manager would be defined as part of Department definition which would be initially loaded by Conversion Team based on the Approver list provided by MCPS. Once Department is defined in ERP Cloud, GL Cost Center information would have the Cost Center Manager defined.

As per current design, All Departments defined in FMS would be brought over to ERP Cloud.

Example for one of the departments definitions.

Department: 01916 - Rock Terrace

Department Description

Effective Start Date: 1/1/51  
Department Set: Common Set  
Name: 01916 - Rock Terrace  
Status: Active  
Action Reason  
Effective End Date

Internal Address Line  
Location: Rock Terrace School - Main Office  
Rock Terrace School - Main Office  
Address: 390 Martins Lane  
Rockville, MD 20850  
UNITED STATES  
Attachments: None

#### 4.3.2 Static Approval Groups (All segments except Cost Center Manager)

Static Approval Groups is widely used for all the segments by different workflows (Journal Approval Workflows/Req Approval Workflow/PO Document Approval Workflow/Expense Workflow (except Org Approver)).

Static Approval Groups is Integral part of BPM Product which can be accessed using below Navigation.

Go to setup and Maintenance from user menu option.

Search Tasks: Manage Approval Groups

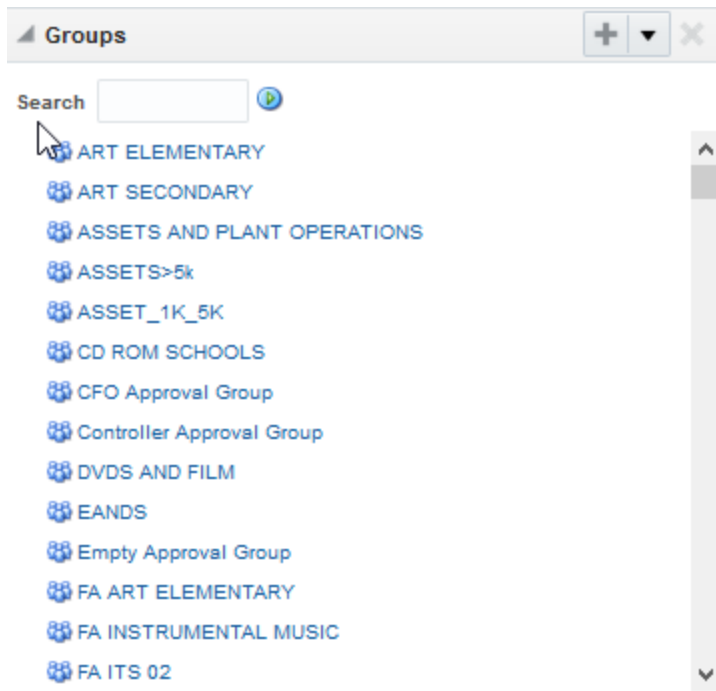

Search

Match With [Tasks](#), [Task Lists](#), [Business Objects](#)

| Name                   |
|------------------------|
| Manage Approval Groups |

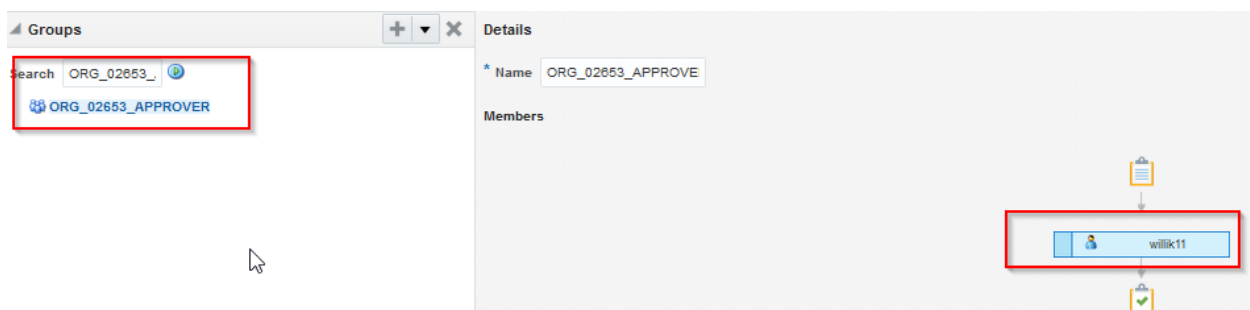

All the Initial Approval Groups would already been defined

Below Prefixes will help to find related Approval groups:

- 1) PROJ: Project Based Approval
- 2) FUNC: Function Based Approval
- 3) ORG: Organization Based Approval
- 4) SPO: School Plant Operations Related Approval (Req Approval)
- 5) Req specific Approval Groups
- 6) CFO Approval Group
- 7) Controller Approval Group

BPM provides search box to search for specific Approver.

---

Current Approvers can be changed using edit icon or multiple users can be added for a specific Approval Group.

**Assumptions:** All the org segments being used in Workflows should have relevant Static Approval Group defined in system since Org Approval is catch-all segment which would be activated once system bypasses Project/Function Approvals.

### 4.3.3 Approval Reports

---

There are 2 reports for checking the Approver against a segment.

- 1) **Dept-Cost Center Manager Report** : this Report would provide all the Cost Center Manager defined in Cloud. Report is developed and placed in below location.

/shared/Custom/MCPS/Department Cost Center Manager Report

- 2) **Approval Groups Report:** Report can be submitted from Jobs screen.

Attached samples reports.

---

## 4.4 WORKFLOW TRANSACTION CONSOLE

Using a single dashboard, administrators can proactively monitor all workflow tasks and resolve the exceptions for Invoice, Expenses, and Journal Approval workflows.

The Workflow Transaction Console lets you monitor workflow tasks, resolve exceptions, and search using your specific criteria.

Use the Workflow Transaction Console to:

- View the latest status of all the tasks in the system.

Take appropriate actions based on the issue description and resolution. For example, you can recover a failed task after correcting the rule or withdraw a task in progress.

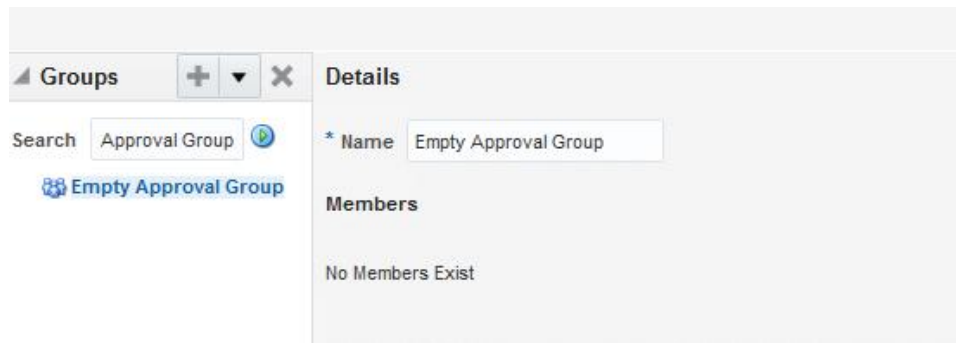

## High-level Diagram for BPM Approvals:

### 4.5.1 Empty Approval Group

We have created an Empty Approval Group if the business conditions are not met. This will be required for Contra Approval rules.

### 4.5.2 SuperGroupApproval Rule

As per MCPS Requirements, For Month end Processing, if a user from “Super Group” creates a Journal Batch , it should bypass all standard Approvals (Project/Function/Org) and follow below path:

- 1) Journal Batch created by Super Group users except controller will go to Controller for Approval.
- 2) Journal Batch created by Controller should go to CFO for Approval.

Super Groups users needs to be **hardcoded** in system, so system can distinguish batches created by these users and exclude them from standard Workflow Approvals.

#### 4.5.2.1 Rule: SuperGroupApproval

This rule specifies below conditions.

If Journal Creation users belong to below group

"AVENTCAR" , "NOAHSHER" , "BUCKLEYG" , "HAWSEMEL" , "SHIFFLES" , "BELLAC00" ,  
"MCGAUGH" , "DENNINGV" , "TSAIGRAC" , "CHEUNJ00"

Assign them to Controller Approval Group

#### 4.5.2.3 Rule: ContraSuperGroupApproval

This is contra rule for ruleset.

---

### 4.5.3 ProjectApproverRuleSet

---

#### 4.5.3.1 Rule: ProjectApproverUpdated

This rule specifies below conditions.

- 1) If Journal charge account is max(debit) line
- 2) and fund segment is "02"
- 3) and Function segment starts with "005" and Function shouldn't belong to (00570,00573,00590)
- 4) and not created by superuser group
- 5) And Journal Category is not "BlueBag"

Then

assign to PROJ\_APPROVER Approval group.

All above conditions provided by MCPS needs to be **hardcoded** in BPM since they are driven by segment values (Fund/Function).

The screenshot shows the configuration for the 'ProjectApproverUpdated' rule. It is an 'IF' rule with the following conditions:

- maxdebt is the maximum of Journal Line.Entered Debit where {
  - Journal Line is a Journal Line and
  - Journal Line.Entered Debit isn't null and
  - Journal Line.Entered Credit is null}
- and
- Journal Line is a Journal Line and
  - maxdebt is Journal Line.Entered Debit and
  - RL.string.substring(Journal Line.Account Combination,1,2) is "02" and
  - RL.string.substring(Journal Line.Account Combination,10,3) is "005" and
  - NOT( RL.string.substring(Journal Line.Account Combination,10,5) in "00570", "00573", "00590" ) and
  - Journal Line.Entered Debit isn't null and

### 4.5.5 OrganizationApproval

#### 4.5.5.1 Rule: ORG\_ALL

This rule specifies below conditions.

- 1) If Journal charge account is max(debit) line and
- 2) Bypass all Conditions mentioned in Rule 4.5.2 "ProjectApprovalRuleSet"
- 3) Bypass all Conditions mentioned in Rule 4.5.3 "FunctionApprovalRuleSet"

THEN

Call the static Approval Groups with format as ORG\_<"Project Value">\_APPROVER.

All above conditions provided by MCPS needs to be **hardcoded** in BPM since they are driven by segment values (Fund/Function/Project).

**Assumption:** Once Approval bypass Project and Function and build Approval hierarchy based on Org based Approvals, We assume that all the Org segments should have respective Static Approval Groups with Approvers defined. If Org Approval group is not defined, system will fail during the Approval process which then can be monitored from Transaction. Workflow Admin can open the failed Transaction log and take appropriate action.

#### 4.5.7 Use Case Example: Adding New Function in BPM

---

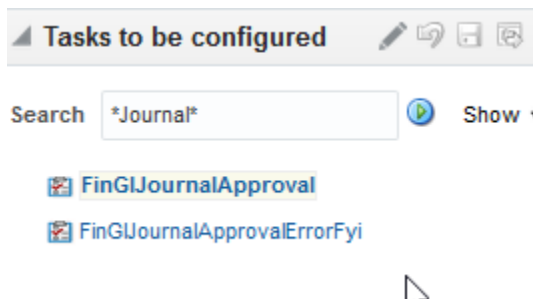

Use Case depicts adding a new function in the existing BPM Approval. Assuming we have received a request to add new function “00530” for Approvals.

Steps Involved:

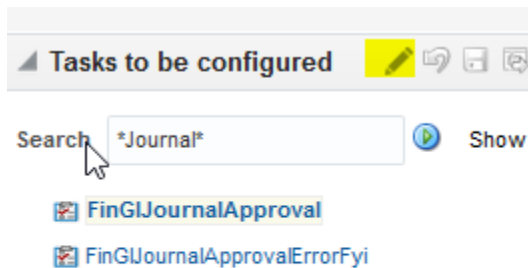

- 1) Navigate to BPM using BPM Worklist.
- 2) Go to Task Administration

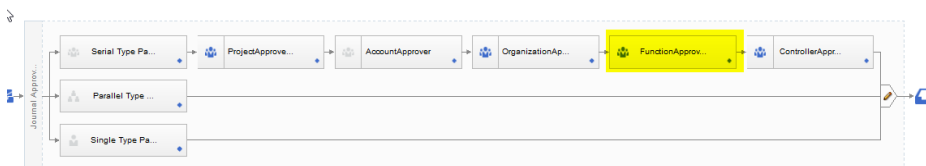

- 3) Search for Task related to Entity Approval

- 4) Edit the task (pencil icon)

- 5) Open the Function Approver Rule

- 6) Add New Function in the condition

7) Make sure we add same condition in Contra Function

The screenshot shows a rule editor interface with a light gray background. At the top, there is a header bar with the text "IF" on the left and a series of icons (plus, minus, up, down, scissors, and a gear) on the right. Below the header, there is a main workspace. The first line of the rule is "Journal Line" followed by "is a" and another "Journal Line" in a dropdown menu, with an "and" operator and more icons to the right. Below this, there are four conditions, each preceded by an unchecked checkbox. The first condition is "NOT( RL.string.substring(Journal Line.Account Combination" followed by a search icon, "in" in a dropdown menu, and a list of account numbers in quotes: "00424", "00528", "00132", "00170", "00520", "00180", "00505", "00179", "00590", "00530". The second condition is "Journal Line.Entered Debit" followed by a search icon, "isn't" in a dropdown menu, and "null". The third condition is "Journal Line.Entered Credit" followed by a search icon, "is" in a dropdown menu, and "null". The fourth condition is "Journal Line.Entered Credit" followed by a search icon, "isn't" in a dropdown menu, and "null". The rule ends with a closing curly brace "}" at the bottom left.

8) Save and commit your changes

9) Create Static Approval Group FUNC\_00530\_APPROVER and add the Approver as user.

10) Test the rule by creating new Journal with Function and check for Approvals.

**Conditions and Exceptions for Journal Approval workflow on segments listed below:**

| Sequence of workflow            | Conditions                                                                                                                                                                                                      | Workflow to be Routed To  |

## 6. Technical Overview

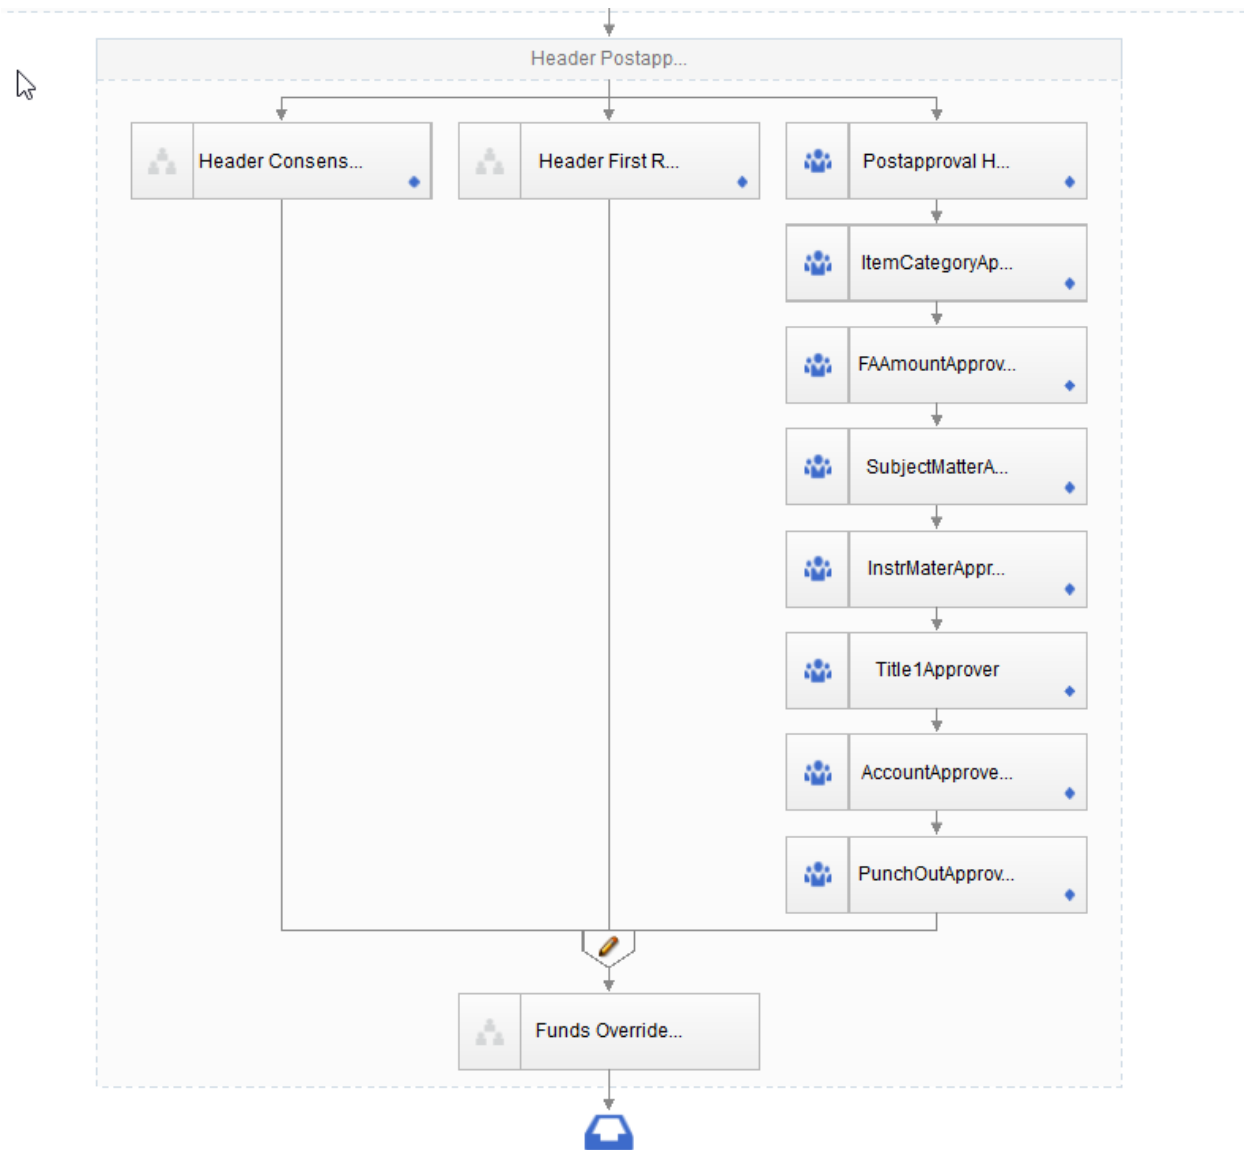

---

### 6.1 Requisition Approval Workflow (ReqApproval)

Below is the flow chart (Vertical) for ReqApproval.

Assignees

As per MCPS Requirements, we have setup workflow reminders as below.

Frequency = 21 days and repeat 2 times.

Below screenshot depicts the same.

☒ Enable Reminder

## 6.1.1 PreApprovalHeaderConsensusRules

### 6.1.1.1 Rule: POETARequired

This Rule states that if the Charge Account Starts with “04” and doesn’t have Project associated, Reject the Requisition.

POETARequired

IF

```
Each {  
  ReqDistributionDimension is a ReqDistributionDimension and  
  ReqDistributionDimension.chargeAccount starts with "04" and  
  ReqDistributionDimension.projectId is null  
}  
  
and  
  
Task is a Task
```

THEN

```
List Builder Supervisory  
Response Type Required  
Number of levels 1  
  
Starting Participant HierarchyBuilder.getPrincipal(Task.creator,-1,"")  
Top Participant HierarchyBuilder.getManager("supervisory",Task.creator,-1,"")  
Auto Action Enabled True  
Auto Action "REJECT"  
Rule Name "POETARequired"  
Dimension Id null
```

---

### 6.1.1.2 Rule: NoPOETARequired

This is skip rule for Rule **POETARequired**

```
IF
.....

Each {
    ReqDistributionDimension is a ReqDistributionDimension and
    NOT( ReqDistributionDimension.chargeAccount starts with "04" ) or
    ( ReqDistributionDimension.projectId isn't null and
      ReqDistributionDimension.chargeAccount starts with "04" )
}

and

Lists is a Lists
.....

THEN

call ▼ IgnoreParticipant ( "PreApprovalHeaderConsensusRules", Lists )
```

### 6.1.2 HeaderHierarchyRules

---

#### 6.1.2.1 Rule: MoveontoNextRule

This is blank rule created to test the workflow.

▲ ▼ MoveontoNextRule

```
IF
.....

1 is 1
.....
THEN

call ▼ IgnoreParticipant ( "HeaderHierarchyRules", Lists )
```

### 6.1.3 CapProjApprover

---

#### 6.1.3.1 Rule: CapProjApprover

This rule states below:

- 1) If Project Id is not null and Project Manager is not null send Approval to Project Manager.

CapProjApprover

IF

Each {

ReqDistributionDimension is a ReqDistributionDimension and

ReqDistributionDimension.projectId isn't null and

ReqDistributionDimension.projectMgrUsername isn't null

}

2)

THEN

List Builder Resource

Response Type Required

Users ReqDistributionDimension.projectMgrUsername

Participants Groups null

Application Role null

Rule Name "CapProjApprover"

Dimension Id null

### 6.1.3.2 Rule: NoCapPrjMgrReject

1) If Project Id is not null and Project Manager is null , Reject the Requisition

NoCapPrjMgrReject

IF

Each {

ReqDistributionDimension is a ReqDistributionDimension and

ReqDistributionDimension.projectId isn't null and

ReqDistributionDimension.projectMgrUsername is null

}

and

Task is a Task

.....

THEN

List Builder Supervisory

Response Type Required

Number of levels 1

Starting Participant HierarchyBuilder.getPrincipal(Task.creator,-1,"")

Top Participant HierarchyBuilder.getManager("supervisory",Task.creator,-1,"")

Auto Action Enabled True

Auto Action "REJECT"

Rule Name "POETARRequired"

Dimension Id null

### 6.1.3.3 Rule: SkipCapProjApprover:

If Project is not present for REQ, ignore the rule.

▲ ▼ SkipCapProjApprover

IF

.....

None {

ReqDistributionDimension is a ReqDistributionDimension and

ReqDistributionDimension.projectId isn't null

}

and

Lists is a Lists

.....

THEN

call ▼ IgnoreParticipant ("CapProjApprover", Lists )

## 6.1.4 Project Approver

---

### 6.1.4.1 Rule: OpenProjApprover

As per this rule, if Req Charge Account belongs to fund "02" and function "005xx" but not in (00570,00573,00590), then go the Static Approval Group" PROJ\_APPROVER". Currently Julie Hall

---

is assigned person for this Approval Group.

 OpenProjApprover

IF

```
Each {  
  ReqDistributionDimension is a ReqDistributionDimension and  
  RL.string.substring(ReqDistributionDimension.chargeAccount,1,2) is "02" and  
  RL.string.substring(ReqDistributionDimension.chargeAccount,10,3) is "005" and  
  NOT( RL.string.substring(ReqDistributionDimension.chargeAccount,10,5) in "00570" , "00573" , "00590" )  
}
```

THEN

```
List Builder Approval Group  
Response Type Required  
Approval Group PROJ_APPROVER  
Allow empty groups True
```

#### 6.1.4.2 Rule: PROJ\_ALL

As per this rule, if

- 1) Req Charge Account doesn't belongs to fund "02" and function "005xx"
- 2) functions (00570,00573,00590) shouldn't be part of charge account
- 3) Project segment is part of Project list provided by MCPS

Then

Call the static Approval Groups with format as PROJ\_<"Project Value">\_APPROVER.

All above conditions provided by MCPS needs to be hardcoded in BPM since they are driven by segment values (Fund/Function/Project).

PROJ\_ALL

---

**IF**

---

```

Each {
  ReqDistributionDimension is a ReqDistributionDimension  and

  NOT( RL.string.substring(ReqDistributionDimension.chargeAccount,1,2) is "02"                                and

        RL.string.substring(ReqDistributionDimension.chargeAccount,10,3) is "005"                                ) and

  NOT( RL.string.substring(ReqDistributionDimension.chargeAccount,10,5) in "00570" , "00573" , "00590"                                ) and

                                                                 "000001" , "000002" , "000003" , "000004" ,
                                                                 "000005" , "000006" , "000007" , "000008" ,
                                                                 "000009" , "000010" , "000013" , "000016" ,
                                                                 "008702" , "008703" , "008713" , "008715" ,
                                                                 "008724" , "008757" , "008780" , "008802" ,
  RL.string.substring(ReqDistributionDimension.chargeAccount,30,6) in "008803" , "008804" , "008805" , "008806" ,
                                                                 "008808" , "008813" , "008814" , "008815" ,
                                                                 "008824" , "008858" , "008863" , "008877" ,
                                                                 "008881" , "008887" , "008889" , "008902" ,
                                                                 "008903" , "008906" , "008911" , "008912" ,
                                                                 "008913" , "008915" , "008924" , "008976" ,
                                                                 "008987" , "008999"

}

```

---

**THEN**

---

|                    |                |
|--------------------|----------------|

### 6.1.7 OrgOwnerApprover

#### 6.1.7.1 Rule: OrgOwnerApprover

This rule specifies below conditions.

- 1) Bypass all Conditions mentioned in Rule 10.1.4 "Project Approver"

## 2) Bypass all Conditions mentioned in Rule 10.1.5 “FuncApprover”

THEN

Get cost center manager as defined under departments. [Report can be used to check the Approvers.](#)

All above conditions provided by MCPS needs to be **hardcoded** in BPM since they are driven by segment values (Fund/Function/Project).

**Assumption:** Once Approval bypass Project and Function and build Approval hierarchy based on Org based Approvals, We assume that all the Org segments should have respective Static Approval Groups/Cost Center Manager with Approvers defined. If Org Approval group is not defined, system will fail during the Approval process which then can be monitored from Transaction. Workflow Admin can open the failed Transaction log and take appropriate action.

### 6.1.8.1 Rule: PostApprovalBegin

This rule is just to begin Post Approval Workflow. We are ignoring it.

```

▲ PostApprovalBegin
IF
.....
1 is 1
.....
THEN

call ▼ IgnoreParticipant ( "PostApprovalHeaderHierarchyRules", Lists )

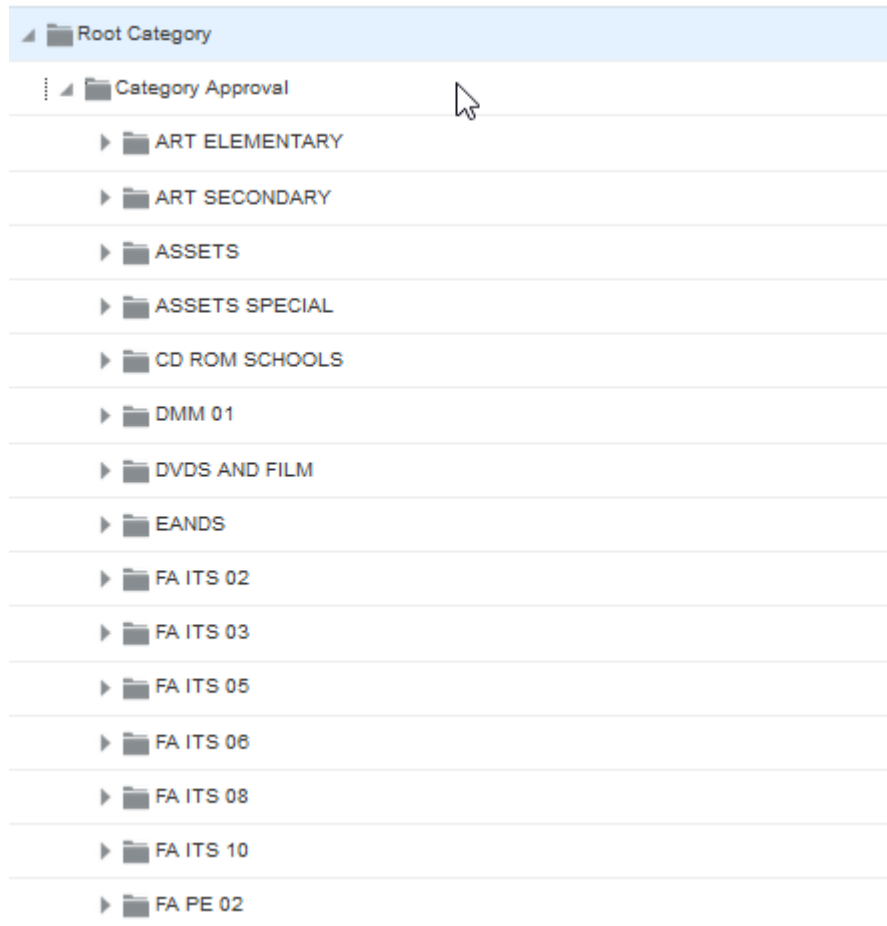

```

## 6.1.9 ItemCategoryApprovers

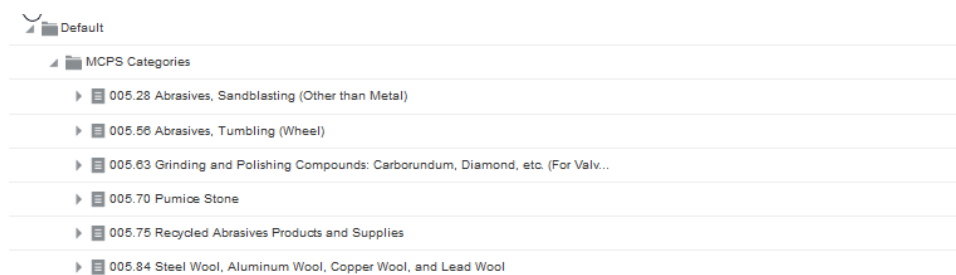

All the rules follow below common conditions:

1. Req shouldn't be associated with Project.
2. Req is not tied to Inventory Code Combination "03-00000-00000-000-00-141040-000000-0000-00"

All the Categories are tied to parent folder (Level-2) based on Approval requirement in "[Manage Procurement Category Hierarchy](#)"

For all Categories which doesn't require approval are put in Default folder.

### 6.1.9.1 Rule: ITS 01

This rule is based on below condition:

Category is assigned to folder ITS 01, assign to ITS 01 Approval group.

ITS 01

IF

```
Each {  
  ReqLineDimension is a ReqLineDimension and  
  ReqLineDimension.procurementCategoryHierarchyLevel02 isn't null and  
  ReqLineDimension.procurementCategoryHierarchyLevel02 is 300000006462947  
}  
and  
ReqHeaderDimension is a ReqHeaderDimension and  
ReqHeaderDimension.internalTransferReqFlag is "N"  
and  
ReqDistributionDimension is a ReqDistributionDimension and  
ReqDistributionDimension.projectId is null and  
ReqDistributionDimension.codeCombinationId isn't 10289
```

THEN

## 6.2 Journal Approval Workflow (FinGJournalApproval)

Below is the flow chart (Vertical) for FinGJournalApproval.

Please also note that for BPM Approvals to work, there should be an approver defined for at least one of below 3 segments.

| Seq. No | Chart of Accounts Segment | Rule           | Action if True | Action if False       |
|---------|---------------------------|----------------|----------------|-----------------------|
| 1       | PROJECT                   | Approver Found | Stop Here      | If not go to Function |

|   |              |                |           |                           |
|---|--------------|----------------|-----------|---------------------------|
| 2 | FUNCTION     | Approver Found | Stop Here | If not go to organization |
| 3 | ORGANIZATION | Approver Found | Stop Here |                           |

### 6.2.1 SuperGroupApproval Rule

As per MCPS Requirements, For Month end Processing, if a user from “Super Group” creates a Journal Batch , it should bypass all standard Approvals (Project/Function/Org) and follow below path:

- 1) Journal Batch created by Super Group users except controller will go to Controller for Approval.
- 2) Journal Batch created by Controller should go to CFO for Approval.

Super Groups users needs to be **hardcoded** in system, so system can distinguish batches created by these users and exclude them from standard Workflow Approvals.

#### 6.2.1.1 Rule: SuperGroupApproval

This rule specifies below conditions.

If Journal Creation users belong to below group

"AVENTCAR" , "NOAHSHER" , "BUCKLEYG" , "HAWSEMEL" , "SHIFFLES" , "BELLAC00" ,  
"MCGAUGH" , "DENNINGV" , "TSAIGRAC" , "CHEUNJ00"

Assign them to Controller Approval Group

SuperGroupApproval

IF

Journal Batch.Created By.toUpperCase() in "AVENTCAR", "NOAHSHER", "BUCKLEYG", "HAWSEMEL", "SHIFFLES", "BELLAC00", "MCGAUGH", "DENNINGV", "TSAIGRAC", "CHEUNJ00"

THEN

List Builder Approval Group

Response Type Required

Approval Group Controller Approval Group

Allow empty groups False

Rule Name "SuperGroupApproval"

Dimension Id null

### 6.2.1.2 Rule: SuperGroupApprovalController

This rule specifies below conditions.

If Journal is created by CHENBEI0, assign it to "CFO Approval Group".

SuperGroupApprovalController

IF

Journal Batch.Created By.toUpperCase() is "CHENBEI0"

THEN

List Builder Approval Group

Response Type Required

Approval Group CFO Approval Group

Allow empty groups False

Rule Name "SuperGroupApprovalController"

Dimension Id null

### 6.2.1.3 Rule: ContraSuperGroupApproval

This is contra rule for ruleset.

## 6.2.2 ProjectApproverRuleSet

### 6.2.2.1 Rule: ProjectApproverUpdated

This rule specifies below conditions.

- 1) If Journal charge account is max(debit) line
- 2) and fund segment is "02"
- 3) and Function segment starts with "005" and Function shouldn't belong to (00570,00573,00590)
- 4) and not created by superuser group
- 5) And Journal Category is not "BlueBag"

Then

assign to PROJ\_APPROVER Approval group.

All above conditions provided by MCPS needs to be **hardcoded** in BPM since they are driven by segment values (Fund/Function).

The screenshot shows the configuration for the 'ProjectApproverUpdated' rule. It is an 'IF' rule with the following conditions:

- maxdebt is the maximum of Journal Line.Entered Debit where {
  - Journal Line is a Journal Line and
  - Journal Line.Entered Debit isn't null and
  - Journal Line.Entered Credit is null}
- and
- Journal Line is a Journal Line and
  - maxdebt is Journal Line.Entered Debit and
  - RL.string.substring(Journal Line.Account Combination,1,2) is "02" and
  - RL.string.substring(Journal Line.Account Combination,10,3) is "005" and
  - NOT( RL.string.substring(Journal Line.Account Combination,10,5) in "00570", "00573", "00590" ) and
  - Journal Line.Entered Debit isn't null and
